

...meeting your business requirements perfectly

## A Sample of Our Portfolio

### Our solutions... *simplify.*

Originally developed for an office stationery firm and subsequently modified for the packaging and kitchen furniture industries, **OnOrder** provides a complete sales and purchase order processing system. Its ease-of-use and streamlined user interface allow for great increases in efficiency over more complex, yet less-featured, systems. Consistently, users of **OnOrder** have seen increased profits and customer satisfaction following implementation of the system.

### Our solutions... *inform.*

Taking data from an IBM UniData database and providing real-time reports using the power of Microsoft SQL Server Reporting Services, the **Balanced Scorecard Reporter** distils operational and sales data and presents it in a user-friendly form. Split across the key performance areas of finance, performance, internal processes, and innovation, reports provide crucial information for improved executive decision making.

### Our solutions... *unify.*

Built for a multi-national consumer electronics firm, the **Business Tracking** system provides task and strategy visibility across departments. Bringing together sales, operations and marketing workers, the system combines Microsoft SharePoint technology with customised ASP.NET web applications, helping deliver a comprehensive overview of business performance for executives and line managers alike.

### Our solutions... *liberate.*

Mobility is crucial to any sales force, and this was the focus behind the **EP Database**. A distributor of power supplies, our customer required a system that allowed their sales team to remain up-to-date whilst out on the road. Synchronising with a centralised Sage database, the solution provides sales staff with the information they need whilst on the move, presented with a powerful yet easy-to-use Windows client.
